

Experts say the willingness to start over from scratch is one of the key traits of successful entrepreneurs. This involves skills but also mindset; the willingness to change products, adjust the marketing approach, shift industries or rebrand. Teaching entrepreneurship in schools will help students gain transferable skills they can use to play the career game well, no matter what the future throws at them. Introducing young adults to entrepreneurship develops their initiative and helps them to be more creative and self-confident in whatever they undertake and to act in a socially responsible way. Entrepreneurship education helps to think outside the box and nurture unconventional talents and skills.

At Dubai Gem Private School, we are having an 'Enterprise Day' in January 2019 that provides students with real-world work experience in a hands-on learning environment, all while having a little fun along the way. Different topics/tasks are allotted for year groups, based on their ability to solve/create etc. The students develop interpersonal skills such as stronger communication, self-confidence and problem-solving which prepare them better for future.

Different categories are designed for different year groups where they are challenged enough to bring out their creativity. Each group would be given the 'slides' containing the information needed to proceed as well as the rubric to follow. The Year 13 students would be there to orient them and support throughout. Their project/product is evaluated against these 'rubrics' provided to judges. Winners would be awarded with certificates and attractive prizes on a later date in a special assembly.

Thank you
